

Investment Objective

The investment objective of the Westwood Short Duration High Yield Fund is to generate a high level of current income while experiencing lower volatility than the broader high yield market.

Strategy Description

In seeking to achieve the Fund's primary objective of providing a high level of current income, the Sub-Adviser generally, but not exclusively, invests in a portfolio of below-investment grade bonds of U.S. companies that we expect to be redeemed through maturity, call or other corporate action within three years or less. While there is no maximum duration on individual securities, the average duration to worst of the holdings within the Fund is expected to be under three years. Based on historical experience through multiple market cycles, the Sub-Adviser believes that such a portfolio in combination with the Sub-Adviser's proprietary securities-selection criteria helps to reduce volatility and improve capital preservation characteristics relative to traditional high yield portfolios. In the Sub-Adviser's experience, traditional high yield portfolios generally possess durations to worst longer than three years. Portfolios with longer durations to worst are usually more sensitive to interest rate volatility. For these reasons, the Sub-Adviser believes the Fund will experience desirable qualities of reduced volatility and enhanced capital preservation over multiple market cycles. In selecting securities for the Fund's portfolio, the Sub-Adviser seeks issuers that exhibit attractive characteristics including, but not limited to: stable businesses with predictable cash flows; positive year-over-year cash flow comparisons supported by stable industry conditions; generation of cash in excess of corporate and financial obligations; and management intentions favorable to bond holders.

Market Commentary

Returns on the short duration segment of the high yield market again approximated current income in 2017's second quarter. A duration shorter than the broader high yield market (as measured by the BofA Merrill Lynch U.S. High Yield Index) helped to reduce volatility in the quarter, but also limited our ability to capture its full upward price move. The Fund nevertheless posted a return which was in-line with the historical returns of the short duration high yield strategy.

Performance Drivers

The Westwood Short Duration High Yield Fund ended the second quarter with 389 bond positions, representing 272 issuers, and in line with last quarter's figures. We believe diversification of holdings is integral for this strategy and helps to reduce risk. The largest position was Sprint Nextel (S) 7% notes due 2020, which represented a 0.76% position in the Fund.

The Fund had a yield-to-worst of 4.42%, or 79% of the broad high yield market rate (as measured by the BofA Merrill Lynch U.S. High Yield Index), with 47% of the market duration-to-worst. This is a 26 basis point increase in the yield during the quarter, and compares to a 12 basis point drop in the yield for the broad high yield market. The average coupon was 6.71%, 24 basis points above the average coupon in the broad market. Approximately 32.6% of the holdings had maturities of less than three years with the other 67.4% having longer maturities but trading to expected early take-outs inside this three-year period. This is a shift in favor of the latter group.

By sector, Healthcare and Basic Industry led, together contributing nearly 40% of the quarterly return, while Energy and Consumer Goods lagged. The top contributor to quarterly returns was Xerium Technologies (XRM) 9.5% notes due 2021, which traded up during the quarter following strong 1Q17 results. The bottom contributor to quarterly returns was EP Energy (EPENEG) 9.375% notes due 2020, which traded down in tandem with declining oil prices.

Overall credit quality in the Fund increased modestly during the quarter. At quarter-end, Double-B rated holdings represented 37.9% of the portfolio, Single-Bs were 50.1% and Triple-Cs were 10.2%. We continue to believe the fund is well positioned to take advantage of potential volatility associated with changing geopolitical risks and rising interest rates considering the large amount of front-end maturities and expected near-term calls held in the portfolio. This helps to dampen duration extension risk and also provides cash which can be reinvested at prevailing market rates. Most recently, we have moderated our underweight to the better-quality, more-spread-sensitive segment of the market and will use market volatility to opportunistically add attractively priced positions to the Fund.

Duration to Worst is the duration of a bond computed using the bond's nearest call date or maturity, whichever comes first. Yield to Worst is the lowest potential yield that can be received on a bond without the issuer actually defaulting. Coupon is the interest rate stated on a bond when it's issued. The coupon is typically paid semiannually. Average Coupon is the dollar-weighted average interest rate, expressed as a percentage of face value, paid on the securities held by a bond portfolio. Duration is a measure of the sensitivity of the price of a fixed-income investment to a change in interest rates. Duration is expressed as a number of years.

BofA Merrill Lynch U.S. Corporate Index an unmanaged index comprised of U.S. dollar denominated investment grade corporate debt securities publicly issued in the U.S. domestic market with at least one year remaining term to final maturity.

S&P Ratings are a grade given to bonds that indicate their credit quality. S&P give ratings after evaluating a bond issuer's financial strength, or it's the ability to pay a bond's principal and interest in a timely fashion. Ratings are measured on a scale that generally ranges from AAA (highest) to D (lowest).

Mutual fund investing involves risk, including possible loss of principal. In addition to the normal risks associated with investing, bonds and bond funds are subject to interest rate risk and will decline in value as interest rates rise. High yield bonds are highly speculative and carry a greater degree of risk. International investments may involve risk of capital loss from unfavorable fluctuations in currency values, from differences in generally accepted accounting principles or from social, economic or political instability in other nations. A company may reduce or eliminate its dividend, causing losses to the Fund. There is no guarantee that the Fund will achieve its stated objective, which can be found in the prospectus, or that of the strategy. Diversification may not protect against market risk.
