

**Strategy Description**

The Global Equity Fund primarily invests in the common stocks of well established companies around the world. The Fund holds between 60-85 equity investments with market capitalizations above USD \$1 billion. The strategy uses a bottom-up stock selection process and has diversified exposure to the best global investment opportunities with risk controls at the country, sector and individual security level. The strategy invests in sound businesses that we believe are mispriced and that can generate sustainable and/or growing economic profit.

**Investment Philosophy**

We invest in businesses that we believe are mispriced and can generate positive and sustainable earnings growth, thus potentially achieving economic profits over time.

**Investment Approach**

Bottom-up stock selection process based on key characteristics:

- Management aligned with the creation of positive economic profit
- Strong business franchise
- Cash flow generation above peer group
- Consistency of earnings growth
- Ability, or prospective ability, to pay dividends

**Investment Process**

### About Westwood

Westwood was founded in 1983 out of a fierce commitment to give investors trustworthy investment solutions. Today, we are entrusted with \$23.6 billion<sup>1</sup> in client assets from both institutional and individual investors in a range of strategies including U.S., emerging market and global equities, global convertible securities, master limited partnerships (MLPs), and multi-asset income. We are focused on achieving excellent long-term results and outstanding service, and we seek to do so by aligning our interests with those of our clients through significant, broad-based employee ownership of our parent company, Westwood Holdings Group, Inc., which trades on the New York Stock Exchange under the symbol "WHG". Based in Dallas, Westwood also maintains investment teams in Toronto and Boston.

*Mutual fund investing involves risk, including possible loss of principal. In addition to the normal risks associated with investing, international investments may involve risk of capital loss from unfavorable fluctuation in currency values, from differences in generally accepted accounting principals or from social, economic or political instability in other nations. Emerging markets involve heightened risks related to the same factors as well as increased volatility and lower trading volume. The Fund uses derivatives. The primary risk of derivative instruments is that changes in the market value of securities held by the fund and of the derivative instruments relating to those securities may not be proportionate. Derivatives are also subject to illiquidity and counterparty risk. In addition, REIT investments are subject to the changes in economic conditions, credit risk and interest rate fluctuations. Investments in smaller companies typically exhibit higher volatility.*

*The MSCI All Country World Index is a free float-adjusted market capitalization weighted index that is designed to measure the equity market performance of developed and emerging markets. The MSCI ACWI consists of 47 country indices comprising 23 developed and 24 emerging market country indices. The developed market country indices included are: Australia, Austria, Belgium, Canada, Denmark, Finland, France, Germany, Hong Kong, Ireland, Israel, Italy, Japan, Netherlands, New Zealand, Norway, Portugal, Singapore, Spain, Sweden, Switzerland, the United Kingdom and the United States. The emerging market country indices included are: Brazil, Chile, China, Colombia, Czech Republic, Egypt, Greece, Hungary, India, Indonesia, Korea, Malaysia, Mexico, Peru, Philippines, Poland, Qatar, Russia, South Africa, Taiwan, Thailand, Turkey and United Arab Emirates. The Benchmark Index's returns do not reflect any management fees, transaction costs, or expenses. Investors cannot invest directly in an index.*

*Return on Equity (ROE) - The amount of net income returned as a percentage of shareholders equity. Return on equity measures a corporation's profitability by revealing how much profit a company generates with the money shareholders have invested. Return on Assets (ROA) - An indicator of how profitable a company is relative to its total assets. ROA gives an idea as to how efficient management is at using its assets to generate earnings. It is calculated by dividing a company's annual earnings by its total assets. Return On Invested Capital (ROIC) - A calculation used to assess a company's efficiency at allocating the capital under its control to profitable investments. The return on invested capital measure gives a sense of how well a company is using its money to generate returns. Comparing a company's return on capital with its cost of capital reveals whether invested capital was used effectively. P/E ratio is price-per-share divided by its earnings-per-share. EV/EBITDA is a comparison of enterprise value and earnings before interest, taxes, depreciation and amortization.*
